New DNA molecule useful for production of amino acids encodes protein imparting lysozyme resistance to Corynebacterium glutamicum strain - The imparting lysozyme resistance to Corynebacterium glutamicum strain - The sequence represents the DNA coding sequence encoding a Corynebacterium glutamicum lysozyme insensitivity protein. This protein control is sequences encoding the lysozyme control in sensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme insensitivity protein can also be mutated, and used to generate controls of Corynebacterium glutamicum in which this protein is larged in a host cell. The DNA encoding the lysozyme insensitivity protein can also be mutated, and used to generate controls of Corynebacterium glutamicum in which this protein is larged in a platamicum is used for the production of amino acids, in particular glutamic acid and glutamine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       lysozyme insensitivity protein. This protein renders lysozyme-sensitive strains of Corynebacterium glutamicum insensitive to lysozyme. DNA sequences encoding the lysozyme insensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme insensitivity protein can also be mutated, and used to generate strains of Corynebacterium glutamicum is which this protein is inactivated and which are therefore lysozyme sensitive. Corynebacterium glutamicum is used for the production of amin

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                 polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               analysing

for identifying Novel polynucleotides derived from Coryneform bacteria, for identify mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous or

Disclosure; SEQ ID NO: 7066; 246pp + Sequence Listing; English

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium and identifying a monologue of a gene derived from coryneform bacterium. Coryneform bacterium acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, puthe and pyrimidine bases, unclosedades, nucleosides, saturated and unsaturated fatty acids, diols, carbohydrates, lipids, compounds, vitamins, cofactors, polyketides and enzymes.
                                                                                                                                                    Nucleic acids from Corynebacterium glutamicum encoding metabolic pathway proteins, useful for producing fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, and purine and pyrimidine bases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

                                                       The present sequence is the total DNA sequence from cosmid clones LP(2)127 and LP(2)128, which contains a Streptomyces aureofaciens (ATCC 13899) DNA that encodes the proteins of the entire chloretracycline biosynthetic pathway. The biosynthetic gene, which can be expressed in heterologous hosts, especially S. lividans, may be useful in the production of antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30001;

The invention relates to combination of two plasmids for cloning the genes encoding the biosynthetic production pathways of chlortetracycline, tetracycline, or their derivatives. One plasmid contains an origin of replication, an actinomycete (such as Streptomyces lividans, s. ariseofuscus, or S. ambofaciens) active antibiotic resistance gene and three or more tandem cohesive end sites. The second plasmid contains an actinomycete active origin of replication and three or more tandem cohesive end sites. The invention can be used to clone a large amount of genetic material for the heterologous production of the antibiotics, chloritetracycline, tetracycline and their analogues. A cluster of genes can be inserted into the plasmid allowing a biosynthetic pathway to be transferred in its entirety to a heterologous host. The invention specifically relates to cloning of the entire tetracycline and chloritetracycline and chloritetracycline and surreofaciens and its expression in a heterologous host such as S. lividans. The present sequence represents a control of the committed control co

                                                                                                                                                                                                                                                                                                                                                                  Bacteria signal to one another to coordinate expression of specific genes in a cell density dependent fashion. This "bacterial signalling" is called "duorum sensing allows a bacterial species to sense its own number and regulate gene expression according to population density. The present sequence is an open reading frame (ORF) of a Pseudomonas aeruginosa quorum sensing controlled gene. Inhibitors of quorum sensing signalling renders a bacterial population more susceptible to treatment. The present invention relates to a method for identifying modulators of quorum sensing signalling in Pseudomonas aeruginosa bacteria. Modulators of quorum signalling in pseudomonas aeruginosa bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       aeruginosa infections. P. aeruginosa is an opportunistic pathogen of immunocompromised individuals (burn patients, cystic fibrosis patients, patients undergoing immunosuppressive therapy and patients with AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             486

The present invention relates to the genomic sequence of Pyrococcus abyssi and P. abyssi proteins (see AAB96053-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAH41224 and the 3' end of this sequence overlaps with the 5' end of AAH41226 proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Db 209411 ATTCGCCATCGTGGACCTGATGATGAGGGAGTTTATGTTGATGATAATGTTAGCCTTGGT 209352

The present sequence represents the BLM (Bleomycin) gene cluster, containing open reading frames (ORES) 8 30. The proteins encoded by the gene cluster are useful for producing peptides and/or polyketide metabolites, especially bleomycin or bleomycin analogues. They are also useful for chemically modifying biological molecules to produce branched methyl groups, and for coupling amino acids and fatty acids. They may be reacted with an apo-carrier protein and coenzyme A to produce a holo-carrier protein. The BLM gene cluster or catalytic domains can be used individually or collectively to produce thiazolidine, thiazoline, bithiazoline and bithiazoline-containing microbial metabolites. The BLM gene cluster may also be used to produce
polyketide metabolites, especially bleomycin, production and for chemically modifying biological molecules -
                                                                                                                                                                                                              Claim 8; Page 97-136; 162pp; English

include: cytostatic; proliferative; vulnerary; immunomodulator;
antidabetic; antiastumatic; antirheumatic; antiarthritic;
antidabetic; antiasthmatic; antirheumatic; antiarthritic;
antidabetic; antiasthmatic; antispaciant; thrombolytic; coagulant;
correction; vasotropic; antipsoriatic and antianglogenic. The
cootropic; vasotropic; antipsoriatic and antianglogenic. The
polynucleotides and polypeptides can be used for preventing, treating or
ameliorating medical condultions and diagnosing pathological condultions.
Colynucleotides, polypeptides, antibodies, agonists and antagonists from
the present invention may be used to treat immune disorders by activating
or inhibiting the proliferation, differentiation or mobilisation of
immune cells, to treat disorders of haematopoletic cells, autoimmune
disorders, allergic reactions, graft versus host disease and organ
rejection, modulate haemostatic or thrombolytic activity, modulate
inflammation, cancers, cardiovascular disorders, neurological disease
bacterial or viral infections. The peptides, uncleotides, antibodies,
agonists and antagonists may be also be used in the exemplification of
                                                                                                                                                                                                    diagnosis; cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antirheumatic; antiarthritic; antiviral; antidiflammatory; antithyroid; antiarbratic; antibacterial; cardiant; dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoletic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection; neurological disease; drug screening; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer - \,

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymersae chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in

The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodias rabled against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as condecutar weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and priners, for sequencing, for renombinant proteins, and in generating anti-sense DNA or production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to carget drugs to a tumour, in assays to determine bloodstal activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Cortacoptides of the invention may also be useful in treating platelet disorders, stem cell disorders, response, to determine duantitative contraceptive, treating osteoporosis and osteoarthritis, anemala, contraceptive, treating osteoporosis and osteoarthritis, anemala, alternating osteoporosis and osteoarthritis, anemala, and infection or from autoimmunity, cancer, allergy, asthma, contraceptive securing manual infection. The inflammatory diseases, nervous system disorders, and infection. The manual encourage of the invention of the prolimential province annower a processor and infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; novel protein; ss; Antianaemic; osteopathic; antiinflammatory; immunomodulatory; cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibody; dermatological; haemostatic; antiathantic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder;

                                                  g
                                                                                                                                                              proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the polypeptides. Polynucleotides of the invention can be used to production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to target antibodies/eliott an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating placelet disorders, stem cell disorders, regenerating bune, cartilage, tendon, ilgament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contract of the proliferation, differentiation and survival of stem cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral sclerosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autoimmunity, cancer, allergy, asthma, graft-versus-host disease, eczema, haemophilia, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection.
Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis; tissue regeneration; immune disorder.

Sequence 1, Application US/08125468
Fatent No. 5589385
GENERAL INFORMATION:
APPLICANT: Ryan, Michael J.
APPLICANT: Lotvin, Jason A.
APPLICANT: Etrathy, Nancy
APPLICANT: Etrathy, Nancy
APPLICANT: Cloning of the biosynthetic pathway for
ITLE OF INVENTION: Cloning of the biosynthetic pathway for
TITLE OF INVENTION: Chortetracycline and tetracyline Formation and cosmids
ITILE OF INVENTION: useful therein
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSEE: American Cyanamid Company
STREET: One Cyanamid Plaza

/lab_host="Escherichia coli strain Xil-Blue"
/note="Vector: pBluescript II SK(-) phagemid; Site_l:
BamHI; Site_2: BamHI; Purified genomic DNA from Gemmata
obscuriglobus was restricted with Sau3AI to give fragments
of 400-300bp and ligated into the BamHI site of the
pBluescript II SK(-) phagemid. The ligated DNA was
electroporated into E. coll XII-Blue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bacteria; Planctomycetales; Planctomycetaceae; Gemmata.
1 (bases 1 to 635)
Jenkins, C., Kedar, V. and Fuerst, J.A.
Gene discovery from sequence tags generated using genomic DNA
11braries constructed from representatives of the planctomycete
division of the Domain Bacteria
Unpublished (2001)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Parasitology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /organism="Gemmata obscuriglobus"

/clone_vector: pBluescript II SK-; Site_1: EcoRI; Site_2:
XhoI; Stress condition II library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (NH4+ - containing) and shifted to TAP - NO3- (24hrs); H2 production
conditions (0, 12hr, 24hr) see Nells et al.,(2000) plant Phys: 12: 127-135; TAP + H2C2 (1, 12, 24 hr); TAP + Sorbitol (1, 2, 6, 24 hr).
PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda zap II (Stratagene) in the EcoRI (5') and XhORI (3') sites: pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al., (1996) Genome Research 6: 791-806."

This protein renders lysozyme sensitive strains of Corynebacterium glutamicum insensitivite to lysozyme. DNA sequences encoding the lysozyme sensitivity protein can be used to construct a recombinant vector for the expression of this protein in a host cell. The DNA encoding the lysozyme insensitivity protein can also be mutated, and used to generate strains of Corynebacterium glutamicum in which this protein is inactivated and which are therefore lysozyme-sensitive. Corynebacterium glutamicum is used for the production of amino acids, in particular
